Subject Re: AIR TESTING IS GETTING SET UP

Richard and all,

I trust you got the reply to your question from Stu.

I notice he did not include everyone on the reply ,so if you would not mind forwarding please.

I will find out what method the chosen lab will use for testing the samples.

We are scheduled to do our base line test on Thursday of next week.

It takes 24 hour to complete the test.

And will be sent chain of custody to the lab.

We are thinking of having testing done every month at least until end of winter,maybe unto spring and fall of 2012 ,because we believe that we are getting a constant low dosage exposure ,due to the persistence of these poisons in the Environment and THE REVOLATIALIZATION.

Our urine winter (off spray "season") samples are what guided us to conclude.

FYI,Weyerhaeuser has listed way to many chemicals on their ODF notification,without the Atrazine and 2,4 -D ,ONLY for the area of OHA study!

It is done on purpose.

To the EPA folk ,

I trust in the choices of chemicals we'll be guided to test for by the team we hired ,but am curious, **if you were to perform an air study (looking at the list of chemicals listed on the ODF spray notices for this fall) ,which chemicals would you test for?**

Thank you so much for your advice,

Maya and Dan

P.S. We agree with Day Owen that it is very important that the consideration of how much time one being tested spends at home ,and we want to add **HOW MUCH TIME THEY SPEND OUTSIDE?**

In Dr.Danna Barr's study Dan ,who spends most of his time outside working on our farm had the highest level of 2,4-D in his urine out of all tested in the group!I spend time outside more than other people on the group ,but have had lower levels than some long term residents.

Both Dan and I are on a vigorous all natural detox cleanse at this point.

Maya,

Would you be willing to share your sampling plan? It would be helpful to know which herbicides you are targeting, how long the sampling devices will be deployed, and what method the lab is going to run to analyze the samples.

Richard

Thank you Richard!

We are welcoming all inquiries , tips ,guidance from EPA's team.
We are very open to your involvement to what ever degree you wish.

All of the equipment has arrived and we are getting the schedule set up
with Stu Turner,who is setting the air samplers up for us.
At this point it looks like they will be set up next week.

Please include him in the conversation as well.
Thanks again,
Maya

Hello, Maya,

I raised the topic of your air sampling plan in a meeting with EPA
this
morning, and if you would find it helpful, EPA has offered to have
their
sampling experts take a look at your plan and provide any relevant
advice. I have copied Sheila, Elizabeth, and Scott on this message.

Richard

Subject: AIR TESTING IS GETTING SET UP

Hi all,

Just to up date Richard,Jae and Karen,
We are hiring a professional to set up ,calibrate our air testing
units ,that will be set up at couple different locations at the home
sites of people tested positive with Timber industry poison
pesticides.
We are using state of the art equipment,that EPA uses.

TE-1000PUF..... complete system
TE-5040 PUF calibration kit.
TE-QMA4 micro-quartz media
TE-1009...glass cartridge w/ steel screens.
Will be set up by a professional,all done legitimately.
We'll have a base sampling done first.
We are looking forward to share this information with you!
Thanks,
Dan and Maya
p.s. We are taking charge to test the most important element ,since we
know that AIR is the MAIN pathway that our families are being
sickened
by the constant low pesticide exposure ,through revolatalization of
poison soaked mountains,even months and years after so called spray
"season".
